CONGENITAL OR DEVELOPMENTAL DENTAL PROBLEMS
Includes Dentinogenesis Imperfecta, and Amelogenesis Imperfecta.

INFORMATION REQUIRED

All Applicants:
- Standard Form 603 to include the following:
  - Diagnosis
  - Treatment
  - Prognosis
  - Recommendations for follow-up over the next 3 years.
- Copy of full mouth series or panorex with bitewings.

CLEARANCE CRITERIA

1. Dentition stable for at least the past 3 years.

<table>

DIAGNOSTIC CODES

520.0 Congenital/Developmental Problems
520.5 Dentinogenesis Imperfecta
520.5 Amelogenesis Imperfecta.

Cross Reference ICD.9.CM

NOTES AND INSTRUCTIONS FOR REVIEWERS:

Reviewers to Consider:
- Stability of dentition.

COMMENTS:

Dentinogenesis Imperfecta: Characterized by abnormally developed dentin, calcified pulp chambers, and root canals (evident on radiographs). These teeth are resistant to decay but the enamel flakes off easily and the dentin is not resistant to wear. Full crowns are needed on all teeth.

Amelogenesis Imperfecta: There are two types of amelogenesis imperfecta: those that arise from hypomineralization and those that have normal mineralization but the amount of enamel is reduced (hypoplasia). Hypomineralization leads to chipping away of enamel and crowns will be needed. The degree of hypoplasia varies from type to type, and treatment may or may not be needed.

Effective 9/1/99
BRUXISM

INFORMATION REQUIRED Any history:

All Applicants:
- Standard Form 603
- Copy of full mouth series or panorex with bitewings.

CLEARANCE CRITERIA | REVIEWER | GUIDANCE
--- | --- | ---
1. No, or resolved, symptoms, e.g., TMJ pain. | DENTAL ADVISOR | CLEAR

Meets clearance criteria, AND
- Mild wear facets.

Does not meet clearance criteria due to one or more of the following:
- Moderate to severe wear facets.

Does not meet clearance criteria due to one or more of the following:
- Current symptoms, e.g., TMJ pain.

DENTAL ADVISOR

DEFER
Occlusal guard required. Defer until evaluation and treatment complete.

DIAGNOSTIC CODES

306.8 Bruxism

Cross Reference ICD.9.CM

NOTES AND INSTRUCTIONS FOR REVIEWERS:

Reviewers to Consider:
- None

COMMENTS:

Background: Applicants with severe bruxism habits are at higher risk for fractures of teeth, fractures of fillings, and periodontal disease.
### INFORMATION REQUIRED

**Any history.**

All Applicants:
- Standard Form 603
- Copy of full mouth series or panorex with bitewings.

### CLEARANCE CRITERIA

<table>
<thead>
<tr>
<th>REVIEWER</th>
<th>GUIDANCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>DENTAL ADVISOR</td>
<td>CLEAR</td>
</tr>
</tbody>
</table>

1. One or more missing teeth.

Meets clearance criteria, **AND**
- No interference with activities of daily living.

Does not meet clearance criteria due to one or more of the following:
- Interferes with activities of daily living.

### DIAGNOSTIC CODES

- 525.1 Missing Teeth
- Cross Reference: ICD.9.CM

### NOTES AND INSTRUCTIONS FOR REVIEWERS:

Reviewers to Consider:
- None

### COMMENTS:

**Background:** Although all teeth support each other and the loss of one tooth can compromise the status of the remaining teeth, the process of supereruption or migration is slow. It rarely leads to an acute problem.
Includes Temporomandibular Arthroplasty.

INFORMATION REQUIRED Any history.

All Applicants:
- Standard Form 603 to include the following:
  - Diagnosis
  - Etiology, if known.
  - Symptoms to include severity and frequency.
  - Limitation of jaw mobility.
  - Treatment plan to include treatment provided and treatment success, i.e., symptoms resolved.
  - Current status
  - Prognosis
  - Recommendations for follow-up over the next 3 years.

If Applicable:
- Discharge summary from related hospitalizations.

<table>

</tr>
</tbody>
</table>

Meets clearance criteria 1-4, AND
- If history of TMJ surgery, post surgery greater than 6 months.

Does not meet clearance criteria due to one or more of the following:
- If history of TMJ surgery, post surgery less than 6 months.

Does not meet clearance criteria due to one or more of the following:
- Use of repositioning appliances.

Does not meet clearance criteria due to one or more of the following:
- Moderate to severe symptoms.
- Use of analgesics or NSAIDS for TMJ dysfunction.

DENTAL ADVISOR
Risk varies - assess based on detailed history.

DIAGNOSTIC CODES
524.6 Temporomandibular Joint Dysfunction
76.5 Temporomandibular Arthroplasty
Cross Reference ICD.9.CM

NOTES AND INSTRUCTIONS FOR REVIEWERS:
Reviewers to Consider:
- Resolution of symptoms.
TEMPORAL MANDIBULAR JOINT DYSFUNCTION (TMJ)

COMMENTS:

Background: Temporal Mandibular Joint (TMJ) dysfunction involves a number of conditions that may cause pain in the TMJ joint or in the muscles of mastication. Causes include: malocclusion, bruxism, ankylosis (from trauma or infection), internal disc derangement, arthritis, rheumatoid arthritis, or condylar hyperplasia. Some conditions require surgery and some respond to conservative medical care. Some individuals may require orthodontia following TMJ surgery.
**INFORMATION REQUIRED** Any history.

**All Applicants:**
- Standard Form 603
- Statement of treatment to include the following:
  - Date completed
- Copy of full mouth series or panorex with bitewings.

**CLEARANCE CRITERIA**

<table>

</tr>
</thead>
<tbody>
<tr>
<td>522.5</td>
<td>Abscessed Tooth</td>
</tr>
<tr>
<td>522.5</td>
<td>Periapical Abscess</td>
</tr>
</tbody>
</table>

**NOTES AND INSTRUCTIONS FOR REVIEWERS:**

**Reviewers to Consider:**
- None

**COMMENTS:**

**Background:** A periapical abscess is an infection at the root apex of a tooth. Although the tooth may be asymptomatic at the time of the examination, it is at increased risk of becoming symptomatic. The tooth must be treated with root canal therapy or extraction.
# DENTAL DECAY

Includes Caries, Provisional (Temporary) Restorations, and Defective Restorations

## INFORMATION REQUIRED

Any history.

All Applicants:
- Standard Form 603 to include the following:
  - Itemized list of all treatment provided.
  - Copy of full mouth series or panorex with bitewings.

## CLEARANCE CRITERIA

<table>
<thead>
<tr>
<th>REVIEWER</th>
<th>GUIDANCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>RN CLEAR</td>
<td></td>
</tr>
</tbody>
</table>

1. No, or resolved, decay.
2. No, or replaced, defective restorations.
3. No incipient decay, i.e., caries that have not advanced through the enamel to the dentin.

### Meets clearance criteria 1-3, AND

- No, or replaced, provisional (temporary) restorations.

### Does not meet clearance criteria due to one or more of the following:

- Incipient decay

### Does not meet clearance criteria due to one or more of the following:

- Current decay.
- Current defective restoration.
- Current provisional (temporary) restoration.

## DIAGNOSTIC CODES

- 521.0 Caries
- 521.0 Defective Restoration
- 23.49 Provisional Restoration (Temporary)

Cross Reference: ICD.9.CM

## NOTES AND INSTRUCTIONS FOR REVIEWERS:

Reviewers to Consider:
- Need for treatment of incipient decay.

## COMMENTS:

**Background:** Untreated caries place PCV at risk for tooth abscess and great discomfort. Safe dental treatment is not always available in Peace Corps countries, therefore, decay must be treated with either fillings, crowns, or extractions. All provisional (temporary) and defective restorations must be replaced with new restorations, i.e., fillings or crowns.

**Incipient Decay:** Caries that have not penetrated through the enamel to the dentin. Does not require treatment. All decay that has reached the dentin must be treated. These lesions will continue to progress which could lead to the tooth becoming symptomatic, i.e., pulpitis, or cause a periapical abscess.
INFORMATION REQUIRED: Any history.

All Applicants:
- Standard Form 603 to include the following:
  - Treatment
- Copy of full mouth series or panorex with bitewings.

<table>
<thead>
<tr>
<th>CLEARANCE CRITERIA</th>
<th>REVIEWER</th>
<th>GUIDANCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. No, or resolved, symptoms.</td>
<td>DENTAL ADVISOR</td>
<td>CLEAR</td>
</tr>
<tr>
<td>2. No residual infection.</td>
<td>DENTAL ADVISOR</td>
<td>DEFER Until resolved.</td>
</tr>
</tbody>
</table>

Meets clearance criteria 1-2, AND
- Fractured tooth or teeth restored or extracted.

Does not meet clearance criteria due to one or more of the following:
- Current symptoms.
- Residual infection.
- Fractured tooth or teeth not restored or extracted.

DIAGNOSTIC CODES
525.1 Fractured Teeth
- Cross Reference ICD.9.CM

NOTES AND INSTRUCTIONS FOR REVIEWERS:
Reviewers to Consider:
- None

COMMENTS:
Background: All fractures teeth or fractured restorations must be repaired due to risk of additional fracture and symptoms. Teeth with small chips in the enamel only do not need to be treated.
IMPACTED THIRD MOLARS (WISDOM TEETH)
Includes Wisdom Tooth Extraction.

INFORMATION REQUIRED

Any history.

All Applicants:
- Standard Form 603
- Copy of full mouth series or panorex with bitewings.

CLEARANCE CRITERIA

1. No, or resolved, symptoms.
2. No associated pathology, e.g., dentigerous cyst, pericornitis.
3. Dentist does not recommend extraction.
4. If extraction, no residual infection and normal healing.

Meets clearance criteria 1-4, AND
- Wisdom teeth extracted.
  DENTAL ADVISOR
  CLEAR

Meets clearance criteria 1-4, AND
- Wisdom teeth fully erupted.
  DENTAL ADVISOR
  CLEAR

Meets clearance criteria 1-4, AND
- Wisdom teeth impacted.
  DENTAL ADVISOR
  CLEAR

Does not meets clearance due to one or more of the following:
- Current symptoms.
- Associated pathology, e.g., dentigerous cyst, pericornitis.
- Dentist recommends extraction.
- If extraction, residual infection or abnormal healing.
  DENTAL ADVISOR
  DEFER
  Until symptoms resolved or extraction.

DIAGNOSTIC CODES

520.6  Impacted Third Molars (Wisdom Teeth)
23.19  Wisdom Tooth Extraction

Cross Reference  ICD.9.CM

NOTES AND INSTRUCTIONS FOR REVIEWERS:

Reviewers to Consider:
- Peace Corps policy requires extraction if the examining dentist recommends extraction. The third molars should be extracted if the examining dentist reports a history of pericornitis (inflammation of the soft tissue surrounding the wisdom teeth) or if the radiographs reveal a cyst associated with a wisdom tooth.

Background: Impacted third molars are at risk of becoming symptomatic. Most Peace Corps countries do not have the facilities to safely extract third molars.
PERIODONTAL DISEASE (GINGIVITIS)
Includes Periodontal Abscess.
